

GENERAL INFORMATION

Course information	
Name	Stochastic optimization
Code	MRE-524
Degree	Master's Degree in Research in Engineering Systems Modeling (MRE)
Year	1 st
Semester	2 nd (Spring) (even year)
ECTS credits	3
Type	Elective
Department	Industrial Organization
Area	Statistics and Operations Research
Coordinator	Andrés Ramos

Instructor	
Name	Andrés Ramos
Department	Industrial Organization
Area	Statistics and Operations Research
Office	SM26.D-103
e-mail	Andres.Ramos@comillas.edu
Phone	915406150
Office hours	Arrange an appointment by email

DETAILED INFORMATION

Contextualization of the course
Contribution to the professional profile of the degree
<p>This subject introduces the student in simulation and data analysis techniques for supporting decision-making.</p> <p>Specifically, the contributions of this course to the professional profile are the following:</p> <ul style="list-style-type: none"> • Knowing the application of system simulation in real environments, pros and cons of their use. • Designing and developing simulation models using a simulation language • Understanding the representation of the uncertainty in input data and analyzing the results for extracting conclusions • Developing a practical work applied to support decisions in a realistic case study • Understanding queuing theory applied to open and closed systems and the link with simulation • Understanding different data analysis techniques to extract information from data available, being either static or dynamic • Applying these data analysis techniques to some data sets and extracting conclusions about the information <p>This subject has both theoretical and practical components, based on the exposition and discussion of each topic but also on the application of the simulation and data analysis techniques to realistic case studies.</p>
Prerequisites
<p>Students willing to take this course should be familiar with linear algebra, and undergraduate-level programming. Previous experience with any modeling language is also desired although not strictly required.</p>

CONTENTS

Contents
Theory
Chapter 1. Introduction
1.1 Generation expansion planning case study. Manufacturing case study. 1.2 Decision tree and scenario tree. 1.3 Two-stage and multistage linear optimization. Hydrothermal coordination problem case study
Chapter 2. Linear optimization
2.1. Simplex method. 2.2. Duality.
Chapter 3. Decomposition techniques
3.1 Fixed cost transportation problem. 3.2 Benders decomposition. Nested Benders decomposition. 3.3 Dantzig-Wolfe decomposition. Lagrangian relaxation. 3.4 Additional improvement in decomposition techniques. 3.5 Stochastic dual dynamic programming.
Chapter 4. Scenario tree
4.1 Characterization 4.2 Generation

Competences and Learning Outcomes	
Competences	
General Competences	
Basic Competences	
CB2.	To know how to apply and integrate knowledge, the understanding of it, its scientific basis, and problem-solving capabilities in new and loosely defined environments, including multidisciplinary contexts, both for research and highly-specialized professions.
Specific Competences	
CE9.	To know techniques, methods and/or necessary tools to carry out a specific research topic in a sector or particular technological context.
Optional Competences	
CO3.	To understand the statistical concepts associated to the representation of random parameters.
CO4.	To understand the mathematical principles of linear optimization, sensibility analysis and duality and the ability to use them.
Learning outcomes	
At the end of the course the student must have the following competences:	
RA1.	Understand where to use and concepts of stochastic optimization
RA2.	Become familiar within the several topics where stochastic optimization can be applied
RA3.	Know how to build an optimization model efficiently
RA4.	Achieve mathematical rigorousness
RA5.	Understand the mathematical techniques used
RA6.	State and solve mockup problems
RA7.	Analyze the solutions
RA8.	Be prepared to extend their knowledge
RA9.	Become familiar with an algebraic language used professionally

TEACHING METHODOLOGY

General methodological aspects	
<p>The objective is improving the learning and incentivizing the autonomous and critical thinking of the students. For that purpose the following teaching resources are used.</p> <p>The teaching resources mentioned require the active participation of the student. It is indispensable that the class activity would be complemented with the personal work of the student and, coherently, it will be taken into account to assess the student performance.</p>	
In-class activities	Competences
▪ Master lectures (20h): presentation of the contents of the subject.	CB1, CB2, CE2
▪ Public presentation of the assignments (10h)	CE3
Out-of-class activities	Competences
▪ Personal work of the student (30h): study of the contents provided in the master lectures. It requires a deep and critical analysis about modeling aspects of the optimization problems allowing different perspectives and incentivizing creativity and critical thought of the student.	CB1, CE2
▪ Assignments (30h): improve knowledge of the techniques presented.	CB2, CE3

ASSESSMENT AND GRADING CRITERIA

Assessment activities	Grading criteria	Weight
Case study	<ul style="list-style-type: none"> Practical case statement Model development Theoretical contribution Solution analysis Written communication skill Teamwork (if done in a team) 	80%
Communication skill	<ul style="list-style-type: none"> Oral presentation of the case study 	15%
Classroom participation	<ul style="list-style-type: none"> Attendance and active participation in class 	5%

GRADING AND COURSE RULES

Grading
Regular assessment
<ul style="list-style-type: none"> Case study will account for the 100%, of which: <ul style="list-style-type: none"> Written report: 80% Oral presentation: 15% Participation: 5% <p>In case that the <i>written report mark</i> is equal or lower than 3.5, the final grade will be the <i>written report mark</i>. Otherwise, the final grade is computed weighting the different marks as the previously shown percentages. In order to pass the course, the final grade should be greater or equal to 5.0.</p>
Retakes
<p>The final grade is computed based only in a new written report about the same or different case study. In order to pass the course, the final grade should be greater or equal to 5.0.</p>
Course rules
<ul style="list-style-type: none"> Class attendance is mandatory according to Article 93 of the General Regulations (Reglamento General) of Comillas Pontifical University and Article 6 of the Academic Rules (Normas Académicas) of the ICAI School of Engineering. Not complying with this requirement may have the following consequences: <ul style="list-style-type: none"> Students who fail to attend more than 15% of the lectures may be denied the right to take the final exam during the regular assessment period. <p>Students who commit an irregularity in any graded activity will receive a mark of zero in the activity and disciplinary procedure will follow (cf. Article 168 of the General Regulations (Reglamento General) of Comillas Pontifical University).</p>

WORK PLAN AND SCHEDULE¹

¹ A detailed work plan of the subject can be found in the course summary sheet (see following page). Nevertheless, this schedule is tentative and may vary to accommodate the pace of the class.

In and out-of-class activities	Date/Periodicity	Deadline
Case study sessions	Every week	
Review and self-study of the concepts covered in the lectures	After each lesson	
Problem-solving	Weekly	
Case study report writing	December	
Case study oral presentation	During the course and, in particular, the last part of the course	

STUDENT WORK-TIME SUMMARY			
IN-CLASS HOURS			
Lectures	Problem-solving	Case sessions	Practices
15	5	5	5
OUT-OF-CLASS HOURS			
Self-study	Problem preparation	Case preparation and evaluation	Final report
25	5	20	10
ECTS credits:			3 (90 hours)

	IN-CLASS ACTIVITIES				OUT-OF-CLASS ACTIVITIES				LEARNING OUTCOMES		
Week	h/w	LECTURE & PROBLEM SOLVING	LAB	ASSESSMENT	h/w	SELF-STUDY	LAB PREPARATION AND REPORTING	OTHER ACTIVITIES	Learning Outcomes		
1	2	Course presentation and topic 1. Introduction to stochastic optimization. Generation expansion planning study case. Production case study. Decision and scenario tree.	Problem solving		3	Review, self-study and problem-solving (2h)	Problem preparation (1 h)		RA1, RA9	RA1.	Understand where to use and concepts of stochastic optimization
2	2	Two-stage and multistage linear optimization. Application to hydrothermal scheduling problem.	Problem solving		4	Review, self-study and problem-solving (2h)	Problem preparation (2 h)		RA2, RA3, RA4	RA2.	Become familiar within the several topics where stochastic optimization can be applied
3	2	Application case: stochastic unit commitment	Problem solving		5	Review, self-study and problem-solving (3h)	Problem preparation (2 h)		RA2, RA3, RA4	RA3.	Know how to build an optimization model efficiently
4	2	Application case: medium-term hydrothermal scheduling	Case study and practice		1	Review, self-study and case-solving (1h)			RA5, RA6, RA7	RA4.	Achieve mathematical rigorousness
5	2	Decomposition techniques.	Case study and practice	Presentation assessment	2	Review, self-study and case-solving (2h)			RA5, RA6, RA7	RA5.	Understand the mathematical techniques used
6	2	Linear optimization. Simplex method. Duality.	Case study and practice		5	Review, self-study and case-solving (1h)	Work preparation (4h)		RA5, RA6, RA7	RA6.	State and solve mockup problems
7	2	Benders decomposition.	Case study and practice	Presentation assessment	2	Review, self-study and case-solving (2h)			RA5, RA6, RA7	RA7.	Analyze the solutions
8	2	Fixed cost transportation problem.	Case study and practice		5	Review, self-study and case-solving (1h)	Work preparation (4h)		RA5, RA6, RA7	RA8.	Be prepared to extend their knowledge
9	2	Small examples of Benders decomposition.	Case study and practice	Presentation assessment	2	Review, self-study and case-solving (2h)			RA5, RA6, RA7	RA9.	Become familiar with an algebraic language used professionally
10	2	Nested Benders decomposition.	Case study and practice		5	Review, self-study and case-solving (1h)	Work preparation (4h)		RA5, RA6, RA7		
11	2	Dantzig-Wolfe decomposition.	Case study and practice	Presentation assessment	2	Review, self-study and case-solving (2h)			RA5, RA6, RA7		
12	2	Lagrangian relaxation. Fixed cost transportation problem.	Case study and practice		5	Review, self-study and case-solving (1h)	Work preparation (4h)		RA5, RA6, RA7		
13	2	Scenario tree.	Case study and practice	Presentation assessment	7	Review, self-study and case-solving (2h)	Final report (5)		RA5, RA6, RA7, RA8		
14	2	Decomposition in two-stage and multistage stochastic planning.	Case study and practice		5	Review, self-study and case-solving (1h)	Work preparation (4h)		RA5, RA6, RA7		
15	2	Improvements in decomposition techniques. Simulation in stochastic programming	Case study and practice		7	Review, self-study and case-solving (2h)	Final report (5)		RA5, RA6, RA7, RA8
