“Simplicity and Transparency in Power Systems Planning”

The **openTEPES** model has been developed at the [Instituto de Investigación Tecnológica \(IIT\)](#) of the [Universidad Pontificia Comillas](#).

It is integrated in the [open energy system modelling platform](#) helping modelling Europe’s energy system.

It has been used by the **Ministry for the Ecological Transition and the Demographic Challenge (MITECO)** to analyze the electricity sector in the latest Spanish [National Energy and Climate Plan \(NECP\) 2023-2030](#) in June 2023.

Open The EU's open science policy

- **Open data**

- FAIR (Findable, Accessible, Interoperable, and Re-usable data)

- **Open-source software**

- **openTEPES development goals**

- Simplicity and transparency
- Code written to be read by humans
- Scalability: from small- to large-scale cases

Case studies

Spain 2030

Europe TF2030

Case SEP2030

2999548 rows, 3513436 columns, 11508142 nonzeros

Case SEPE2030

5165034 rows, 5454024 columns (1310400 binary) and 21855526 nonzeros

Case ES2030

5162243 rows, 6832942 columns, 21554828 nonzeros

Case TYNDP DE2050

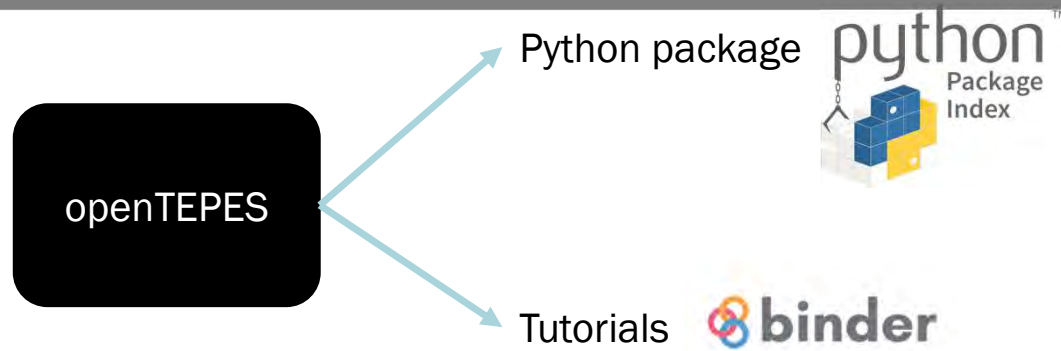

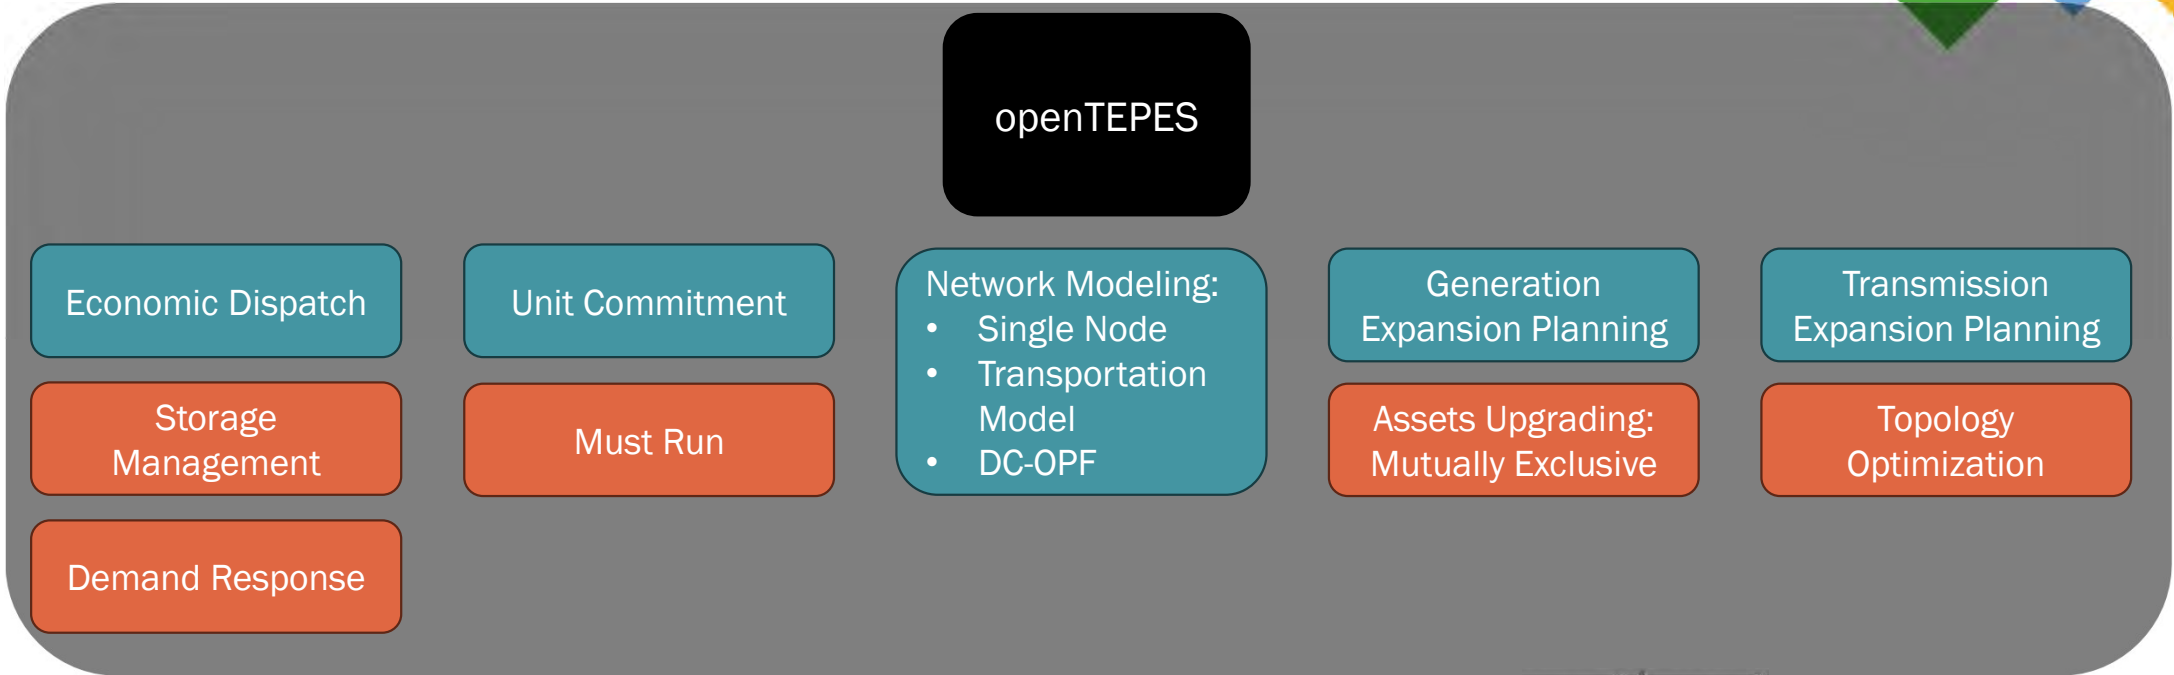

22157904 rows, 26966415 columns, 73814159 nonzeros

Open The EU's open science policy

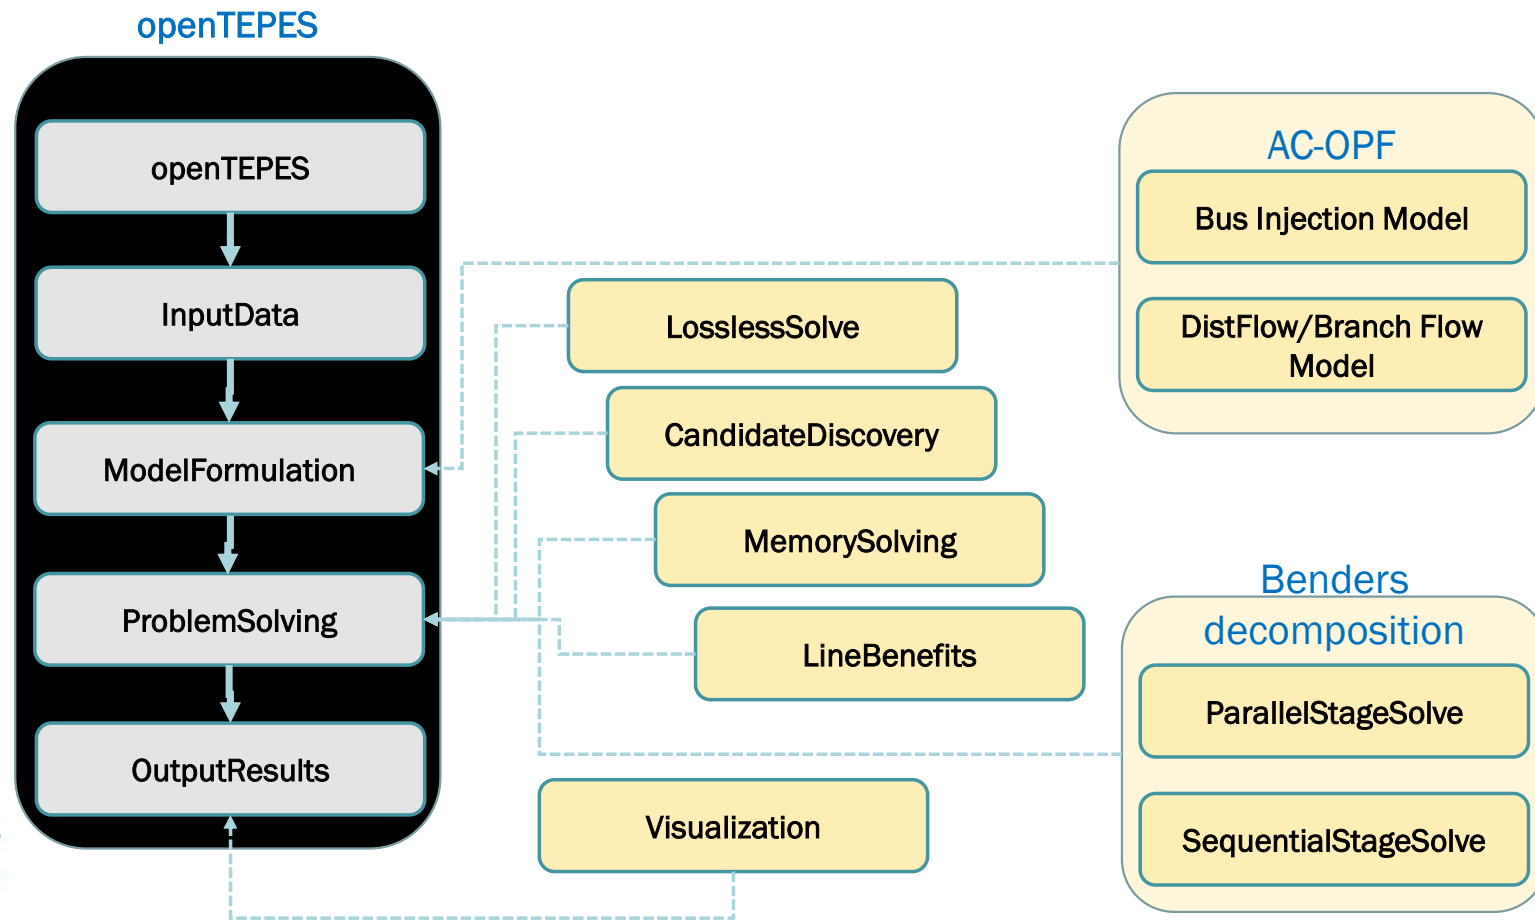

- Numerical stability
 - Natural scaling variables and constraints around 1
 - Make 0 very small values
 - Condition number
 - Crossover
- Tight and compact formulation of some constraints with binary variables (minimum up/down time, startup/shutdown)
- Facilitate preprocessing
- Benders decomposition for very-large-scale cases

openTEPES capabilities

Plain openTEPES and advanced modules

Thank you

Andrés Ramos
