The objective of this Lab practice is to implement several examples of JavaScript code to manage HTML forms.

1 Simple forms

Create simple forms using the examples presented in the slides of chapter 2.

Verify the submission process by assigning the following URL to the action field of the form tag:

> http://www.iit.upcomillas.es/cgi-bin/test-cgi

2 Complete form

Due to the increasing success of web-based applications, our boss has decided to create an on-line application to manage orders, using the form that appears on the figure.

Our pre-requisites are:

- Fields with asterisk (*) are mandatory. They cannot be empty.
- When the user hits the button, a calendar implemented in JavaScript should appear to help introduce the date in the form.
- The field for email address must contain the @ character.
- You are allowed to make changes and improvements in the proposal

Rellene este breve formulario y pulse enviar.

Empresa:

*Nombre de la empresa

Actividad empresarial

C.I.F

Contacto:

*Nombre

*Cargo

Email

*Teléfono

Fax

Pedido:

Código de producto

Nº de Unidades

*Dirección de entrega

Fecha de entrega

Urgencia   baja

Observaciones:

¿La dirección de facturación es la misma que la de entrega?   SI   NO

¿Como desea recibir la factura?   email
