1) The price of international phone calls depends on the geographic area of the country and the number of spoken minutes. The following table presents the cost per minute an per zone. Each area has an identification code.

Code	Geographic area	Price
12	North America	2
15	Central America	2.2
18	South America	4.5
19	Europe	3.5
23	Asia	6
25	Africa	6
29	Oceania	5

Write a Php program to calculate the total cost of a phone call.

- Two variables are needed, code and numin, where code is an integer that represents the code of the geographical area, and numin is another integer representing the duration of the phone call.

2) Write a program to calculate the new salary of an employee according to the following criteria.

- salary < \$1000 →increment 25%
- salary >=1000 and salary <=\$1500 →increment 21%
- salary > \$1500 →increment 18%

Salary is a real variable containing the salary of an employee.
