The objective of this practice is to check the compatibility and accessibility of a web site.

1 Accessibility Tests

To perform the accessibility tests, the site has to be published in Internet.

- Upload your site in the university server (SIFO)
- Using a browser, check that the URL is correct.

1.1 Accessibility validation

First, check the accessibility manually:

- Check that your site works in IE and Firefox
- Change the size of window
- Change the size of font

Check the accessibility of the site using the available tools in http://www.tawdis.net/ and http://www.sidar.org/hera/

2 Compatibility validation

Check the compatibility of your site using the CSS Validator or HTML Validator in http://www.w3.org/

If no errors are encountered, modify the HTML code to introduce some, and run the test again.
